### **DETAILED ACTION**

Claims 51-62 are pending in this application.

#### ***Information Disclosure Statement***

1. The information disclosure statement (IDS) submitted on July 7, 2003 was noted and the submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the examiner has considered the information disclosure statement.

#### ***Double Patenting***

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

2. Claim 51 is rejected under 35 U.S.C. 101 as claiming the same invention as that of claim 21 of prior U.S. Patent No. 6,617,328 B2. Both the instant application and the patent are directed towards a dosage form for delivering ranolazine to a human comprising at least 50% by weight ranolazine and at least one pharmaceutically acceptable excipient, wherein the dosage when administered at least once over a 24 hour period provides peak to trough ranolazine level ratio in the plasma that does not exceed 4:1 over the 24 hour period. This is a double patenting rejection.

Art Unit: 1616

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 52-62 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 21 of U.S. Patent No. 6,617,328 B2. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant application and the prior art patent is directed towards a dosage form for delivering ranolazine to a human. The differences between the two are the specific isomer used and the weight percent of the drug. It is the position of the examiner that these are obvious differences. Claim 21 of the prior art teaches that the composition comprises at least 50% by weight of the drug. It would have been obvious to one of ordinary skill in the art to increase the amount of drug in the dosage form to increase the effectiveness of the dosage form. The other difference is the specific isomer of the drug (S) or (R). This would also have been obvious to one of ordinary skill in the art to select the specific isomer of the drug would give the best results for the dosage form. Finally, it would have been obvious to one of ordinary skill

Art Unit: 1616

in the art to formulate the dosage form in a manner that would contain specific release characteristics (i.e. location in the body, pH, etc.).

### ***Conclusion***

4. Claims 51-62 are rejected.
